

$$T_{ij} = \begin{cases} p_{\text{stay}} & j = i \\ \frac{1}{7} (1 - p_{\text{stay}}) & j \neq i \end{cases}$$

$p_{\text{stay}} = 0.95 \Rightarrow$ same dwell statistics as the ring,
but all 7 jump destinations equally likely

A control2 corpus excerpt, tokens colored by the active state z_t (opener in gray):

It is done, and submitted. You can play “Survival² Game”, “P⁴ 1 Game”, or the “Short Game”.
I hope you like my soundtrack as well. 5 different songs are made, and as always the mood is a
different type⁰ of genre². ⁵ Survival Game: ...
