

$$T_{ij} = \begin{cases} p_{\text{stay}} & j = i \\ \frac{1}{2} (1 - p_{\text{stay}}) & j = i \pm 1 \pmod{8} \\ 0 & \text{otherwise} \end{cases}$$

$$p_{\text{stay}} = 0.95 \Rightarrow \text{mean dwell} \approx 20 \text{ tokens}$$

A corpus excerpt, tokens colored by the active state z_t :

... **3** In survival, “Survival” will be presented in light of **4** the same engines of the original game.
 As L **3** urea writes, the game “will keep a relaxing feeling with a definite **2** imperative aim”. ...
